File: USPT

Oct 31, 2000

DOCUMENT-IDENTIFIER: US 6140063 A

TITLE: In vitro screening assay for identification of compounds that inhibit cytopathicity of viral infection

BSPR:

Dioxins or dioxin-like compounds are a loosely defined family of organochlorine molecules with close structural and chemical similarities. Additionally, these compounds, by virtue of their similar structure and chemistry, share a common mechanism of toxicity. The prototypical dioxin, and the best studied, is 2,3,7,8 Tetrachlorodibenzo-P-Dioxin (sometimes called 2,3,7,8-TCDD or TCDD or dioxin). Besides 2,3,7,8 Tetrachlorodibenzo-P-Dioxin, this group of compounds include not only the dibenzo-p-dioxins, but also dibenzofurans, azobenzenes, dibenzo-ethers, certain polychlorinated biphenyls, certain polyaromatics and other compounds. Toxicity of these compounds is dependent on a planar, polyaromatic structure with lateral halogen substitutions.
